BASIC-ABSTRACT:

NOVELTY - A method for managing a purchase request using a communication network is provided to decrease a distribution cost by processing a purchase request of a buyer using a communication network.

DETAILED DESCRIPTION - A buyer inputs a desired item of a product, a buying amount, a buying term, a price condition, and a wanted destination with a buyer terminal(401). An agency inquiries seller information

database storing
information with respect to a plurality of sellers, and
selects selling
candidates(402). The agency transmits buying information
transmitted from the
buyer to each selling candidate(403). The selling
candidates transmit selling
information to the agency(404). The agency transmits
information including the
item, the buying position, each product capacity of each
selling candidate out
of the buying information and each selling information to a
plurality of
delivery companies and logistics companies(405). The
delivery companies and
logistics companies transmit delivery/logistics information
to the agency(406).
The agency selects an optimum seller, delivery company and
logistics company
based on the above information(407). The information with
respect to the
seller, the delivery company and the logistics company are
transmitted to the
buyer(408).
